Technical Specification

Semi tooled up EV Chassis & Subassemblies

1. **Scope & Purpose:** This document provides a technical overview of the Semi tooled up electric vehicle (EV) chassis and subassemblies to be developed for the Modular Electric 2-Wheeler Platform, a project supported by the Ministry of Heavy Industries (MHI). It covers the chassis and Subassemblies design philosophy, materials to be used, fabrication processes, fixture strategy, dimensional requirements, and quality control methods to be followed during manufacturing.
2. **Chassis and Subassemblies Overview:** The semi tooled up chassis & Subassemblies needs to be a hybrid structure combining fabricated sheet metal panels with a tubular space-frame sub-structure. This approach needs to be adopted in these builds to enable rapid manufacturing and reducing heavy tooling investment. The assembly should be designed to include the all the EV components battery pack, motor mounts, suspension System, body mounting provisions and electrical hardwares in the most efficient as specified.
3. **Semi Proto Tooling Methodology needs to be :**
 - High dimensional repeatability
 - Structural consistency
 - Controlled welding distortion
 - Accurate mounting interface
 - Production-level tolerance
 - Consistent assembly quality across batches

Under this methodology, it is needed to develop and utilize manufacturing aids and process-control tools similar to those used in mass-production environments, including:

- Child-part fabrication fixtures
- Sub-assembly welding fixtures
- Main chassis welding fixtures
- Truing fixtures for dimensional correction and alignment
- Checking gauges for critical dimensions and mounting interfaces
- Inspection gauges for quality verification
- Assembly fixtures for subsystem integration
- Locating and clamping fixtures for repeatable manufacturing
- Weld positioning fixtures and jigs
- Dimensional inspection setups and master references

The semi-proto should have the following:

- Development of controlled fabrication and welding fixtures
- Better dimensional stability compared to manual prototype fabrication

- Improved alignment and repeatability of critical mounting points
- Structured quality inspection during fabrication
- Production-oriented manufacturing controls
- Reduced tooling investment while maintaining high manufacturing quality
- Production-representative components suitable for validation and testing
